

PROJECT NOTIFICATION: Bond Brook Transmission Line Build

October 6, 2023

Dear Neighbor:

As part of our commitment to provide safe, reliable service to our customers, Central Maine Power (CMP) is building a new overhead transmission line in its existing Bond Brook area right-of-way (ROW) to deliver electricity to Augusta area customers who depend on it.

Beginning in November 2023, CMP plans to construct a new, half-mile long 34.5kV transmission line adjacent to an existing line on the hill between the Bond Brook Recreation Area and Mount Vernon Avenue, where the Bond Brook Substation is located, and adjacent to the City of Augusta Public Works facilities. The new line also will connect to an existing line in the recreation area.

The Bond Brook Substation currently is radially fed by one transmission line and is need of a second one to reliably meet the electricity needs of 3,802 customers who receive power through three distribution circuits. This area had two until recently. One of two 34.5kV transmission lines that connected to the Bond Brook Substation and extended through Mill Park was knocked out of service due to an underground cable fault in July 2022. The non-functioning transmission line will be removed from Mill Park.

We invite you to join us and learn more about this project at a Public Information Meeting at 6 p.m. on Monday, October 16, at Lithgow Library, 45 Winthrop Street, Augusta.

CMP's plans also are presented in the enclosed Bond Brook Transmission Line fact sheet.

If you have any questions, please contact our Project Outreach Team at 1-888-267-0831 and be sure to reference "Bond Brook" and our specialist will be in touch with you or email us at Outreach@cmpco.com.

Thank you for your understanding and cooperation as we undertake this endeavor.
